JOB OBJECTIVE

Seeking an entry-level opportunity in the IT industry where I can apply my technical, analytical, and problem-solving skills to contribute effectively to organizational goals.
Committed to continuous learning, delivering quality solutions, and collaborating with teams to support innovation and business success.

EDUCATION

2022-2026: B.E. Computer Science and Engineering from University College of Engineering, Kancheepuram, Anna University.
CGPA: **8.0**
10th Percentage: 99.8
12th Percentage: 90.7

TECHNICAL SKILLS

- Programming Languages: Java, Python, SQL
- Backend Technologies: Spring Boot, REST APIs
- Databases: MySQL (Basic)
- Tools: Git, GitHub, IntelliJ IDEA, VS Code
- Operating Systems: Windows, Linux (Basic)

SOFT SKILLS

- Problem-Solving
- Communication
- Adaptability
- Teamwork

INTERNSHIP

Completed an AI internship focused on applying machine learning techniques to solve real-world business problems.

CERTIFICATIONS

- Software Engineering Job Simulation – JPMorgan Chase & Co.
- Naan Mudhalvan – Java with Spring Boot Level 1 and 2
- IBM python for Data science, AI & Development – Coursera

PROFILE SUMMARY

- Computer Science Engineering undergraduate graduating in 2026, with strong academic foundations in programming, data structures, and core system concepts.
- Hands-on experience in Java, Python, SQL, and backend development gained through academic projects and internship exposure.
- Familiar with the Software Development Life Cycle (SDLC), including requirements analysis, development, testing, and basic deployment practices.
- Demonstrated problem-solving and analytical skills, with the ability to apply logical thinking to technical challenges.
- Motivated and detail-oriented fresher aspiring to begin a professional career as an Associate System Engineer, contributing to enterprise-level technology solutions at IBM.

PROJECTS

Calculator API – Java Spring Boot

- Developed a RESTful Calculator API using Java and Spring Boot to perform arithmetic operations with proper request handling and exception management.
- Implemented clean controller-service architecture and tested API endpoints to ensure accuracy, reliability, and scalability.

Multivendor Marketplace System – Java Spring Boot

- Built a multivendor marketplace backend system using Java Spring Boot, enabling vendor registration, product management, and order processing.
- Designed REST APIs and database integration following layered architecture principles, ensuring secure and efficient data flow.

Animal Classification System

- Developed an AI-based image classification system to identify and categorize animals using machine learning techniques in Python.
- Performed data preprocessing and model evaluation to improve classification accuracy and reliability.

Voice Emotion Recognition System

- Implemented a voice emotion recognition model to detect human emotions from audio signals using machine learning algorithms.
- Applied audio feature extraction and preprocessing techniques to enhance model performance.

Sentiment Analysis System

- Built an NLP-based sentiment analysis application to classify text data into positive, negative, and neutral categories.
- Utilized text preprocessing and machine learning models to achieve accurate sentiment predictions.

Community Maintenance System

- Designed and developed a web-based community maintenance platform to enable residents to submit and track maintenance requests efficiently.
- Implemented responsive user interface and backend integration to streamline complaint management, status tracking, and administrative operations.
